

Broadleaf weed control in tillering spring wheat at Rosemount, MN - 2009. Durgan,

Beverly R. and Douglas W. Miller. This experiment was designed to evaluate broadleaf weed control and wheat injury with broadleaf herbicides applied to tillering wheat. The experiment was conducted at Rosemount, MN on a Waukegon silt loam soil. Following soybeans, the experimental area was fall chisel plowed. In the spring, the area was fertilized with 50 lbs/A N and 75 lbs K.. The field was disked once and field cultivated twice. 'Freyr' hard red spring wheat was seeded on May 4 at 85 lbs/A. The experimental design was a randomized complete block with three replications and plot size was 10 by 24 ft. All herbicide treatments were applied to a 6 ft strip with a backpack type sprayer delivering 10 gpa at 35 psi using 11001 flat-fan nozzles. A broadcast application of Puma (fenoxaprop & safener) at 0.5 pt/A (0.063 lb ai/A) was applied on May 29 to control grassy weeds. Visual weed control and yield data are presented in the table below. No visible wheat injury symptoms were noted. Environmental conditions and plant sizes are listed below.

Treatment Date June 11

Temperature (degrees F)	
air	70
Soil Moisture	moist
Relative humidity	30
Sky	50% clouds
Wind	N 0-5
Rainfall before	
Application	
Week 1 (inch)	2.11
Rainfall after	
Application	0.63
Week 2 (inch)	0.59

Common Lambsquarters

height (inch)	2-8
density (#/ft ²)	5.75

Pennsylvania Smartweed

height (inch)	1-5
density (#/ft ²)	4

Redroot Pigweed

height (inch)	1-5
density (#/ft ²)	10.25

Wild Buckwheat

height (inch)	4-6
density (#/ft ²)	15.5

Wild Mustard

height (inch)	4-12 (bud to flower)
density (#/ft ²)	scattered

Wheat

height (inch)	10-12
leaf stage	6.75 to 7, jointing (Zadoks Z17, 22-23, 31)
tiller #	2-3
